Virtustream Completes Acquisition of Enomaly, Inc.

Virtustream Enhances Cloud Brokerage and Public Cloud Capabilities with Enomaly Acquisition

San Francisco — February 9, 2012 – Virtustream, Inc., a leading provider of enterprise cloud solutions, today announced that it has completed its previously announced acquisition of Enomaly, Inc., an early innovator in cloud and pioneer in cloud exchanges. The integration of Enomaly and its software capabilities will further enhance Virtustream's enterprise class cloud solutions, enabling customers to benefit from the dramatic operational advantages and cost savings of cloud computing.

Virtustream will continue to support Enomaly's existing products, including its ECP public cloud software and SpotCloud, a cloud exchange offering a marketplace and cloud-to-cloud federation. Both ECP and SpotCloud will be enhanced further with additional security. In 2012, Virtustream will also integrate additional public cloud functionality and cloud exchange capabilities into *xStream*, Virtustream's enterprise cloud solution. In addition, with the acquisition of Enomaly, Virtustream continues to expand its global presence by adding distribution in China and a cloud software development center in Canada.

"With our acquisition of Enomaly, Virtustream continues to shape the cloud industry for the enterprise client," said Bill McNamara, Chief of Corporate Development, Virtustream. "Combining Enomaly's cloud exchange, federation and public cloud capabilities with Virtustream's Micro-VM cloud technology enables customers to efficiently pool data center resources, use hybrid clouds and federate between private, virtual private and public clouds - all assured by SLA guarantees that are models for the industry."

About Virtustream
Virtustream (www.virtustream.com) is a leading enterprise class cloud solution provider, specializing in moving complex enterprise IT environments to the cloud. Virtustream offers *xStream*, a highly secure, high performance enterprise class cloud solution for private, virtual private, hybrid and public clouds. *xStream is available both as management software for existing data centers/clouds and also as a managed service from Virtustream's own cloud. *xStream* provides highly secure, multi-tenant, multi-hypervisor cloud management and managed cloud services - powered by Micro-VM technology - delivering significant efficiency savings beyond traditional virtualized environments, with true consumption based pricing. Virtustream also provides comprehensive professional services to help customers assess, design, migrate,

manage and operate clouds. Virtustream has over 15,000 business customers using our software. Virtustream offers *xStream* worldwide, owns its own data centers in the U.S. and U.K., operates an international Cloud Exchange, and has offices in New York, Washington D.C., San Francisco, Atlanta, London and Dublin with partners in Asia and China.
